PATIENT SPECIFIC HEART MODELS

Accuracy of 16 μm

Pre-Surgical Planning

Cost Efficiency

Faster Operations

Patient Specific

MODEL OPTIONS

- 1** 3D Life unique patient specific Heart Models provide the amazing opportunity for the surgeon to hold his/her patient heart in his hands before the surgical operation begins! These high quality models are designed specifically for each patient heart and can help reduce medical errors and decrease cost of hospitals while optimizing health care treatment and experience for the patients!
- 2** 3D Life can show all unique anatomy of the patient's heart, either in pediatric cases, or in adult cases with unparalleled accuracy and precision.
- 3** 3D Life's heart models are uploaded to its unique 3D Clinical Cases Library, which is the first in Europe, and can be used for educational and simulation purposes like a virtual operating room environment.

CUSTOMIZATION

➔ All heart models can be customized according to the patients needs, whether it is calcification of the aorta, a heart tumor or any other pathology, 3D Life can add it to your heart model as long as it can be exported by the medical examination (CT/MRI Scan).

➔ 3D Life can add further customization, in the form of the lungs, and thorax surrounding the heart (as seen in the title page) upon customer request.

ORDER NOW

And have your model delivered at the place **of your selection** and plan your operation **before the patient enters the surgery room!**
